MINING

Projects in the mining industry represent complex and challenging undertakings for all parties involved. The Lola's mining program includes surface and underground mining equipment such as:

1. spreaders with tripper cars,
2. excavators,
3. mobile and semi mobile crushers,
4. self-propelled transporters,
5. complete transport systems.

Thanks to the modern equipment for cutting, bending, welding, and our crane capacities, we produce large sized and comprehensive steel structures. Also, Lola has a well equipped equipment fleet and its own foundry, so it is capable of independently producing the majority of mechanical components that are installed in these machines.

Lola has its own transport and logistics capacity, which completes the entire process of production, delivery and installation of mining equipment machinery.

Production and assembly of spreader ARS 2000 with tripper car, TKF, TE Kostolac
